

HANSEN JAPRI 叶俊铭

AI Fullstack Developer | AI Software Engineer | AI Native Engineer | Product Engineer | Backend Engineer | AI Agent Engineer

Profile

I am an AI-Native Builder, Backend Developer, and Product-Minded Engineer specializing in rapidly transforming abstract ideas into production-ready software. Grounded in a strong business acumen and an entrepreneurial journey that started in junior high school, I excel at identifying market friction and turning real-world problems into viable, high-impact opportunities. Combining AI acceleration (ChatGPT, Claude, Claude Code) with rigorous engineering discipline (System Design, API/DB Design, Security, Cloud, Docker, TDD, CI/CD), I build reliable, commercially viable products. In problem-solving, I prioritize rapid incident containment to mitigate operational and financial risk, followed by root-cause analysis using the 5 Whys framework to systematically harden workflows, SOPs, and validation guardrails.

Experience - 经历

29 July
2026

JPMorgan Chase Job Simulation

Investment Banking

- Identified an ideal M&A target based on strategic and financial criteria, preparing a concise company profile and auction process summary.
- Constructed a Discounted Cash Flow (DCF) model to value the target company, adjusting for competitor bids and supply chain disruptions.

28 July
2026

JPMorgan Chase Job Simulation

Software Engineering

- Designed and implemented a Spring Boot microservice using Apache Kafka to process high-volume transaction messages and integrate with an external REST API.
- Developed transaction validation and persistence logic using Spring Data JPA and H2 Database, creating reliable REST endpoints for user balance queries.

Smartbook AI — Lead Developer / Creator

Live Demo: <https://smart-book-ai.vercel.app/>

Github: <https://github.com/HansenJapri/SmartBookAI>

Description: An AI-powered business management and automation platform for SMEs, combining clean dashboard visualization with intelligent AI agents to streamline daily operations.

Key Features & Architecture:

- AI Action (Agentic CRUD): Executes automated data manipulation (Create, Read, Update, Delete) across dashboards using natural language text prompts.
- RAG & Memory Management: Integrates Short-Term Memory for active session context and Long-Term Memory via Retrieval-Augmented Generation (RAG) to accurately query internal business data.
- AI Guardrails: Enforces strict boundary controls (system prompts & similarity thresholding) to prevent out-of-scope responses and keep answers strictly focused on the business domain.
- Smart OCR Expense Tracker: Automates expense logging from receipt photos/uploads using OCR tuned with manual labeling (Roboflow, 50 initial datasets) to maximize line-item extraction accuracy while minimizing AI token costs.
- Tech Stack: Google Gemini API (2.5 Flash, 3.1 & 3.5 Flash Lite), React 18, Vite, React Router, Recharts, PapaParse, jsPDF, Supabase (PostgreSQL, Supabase Auth, Row Level Security, Edge Functions).

Education 教育背景

High School - 高中

SMA Katolik Santu Petrus Pontianak

2021 - 2024

Bachelor of Information Technology - 本科学位

Universitas Multimedia Nusantara

2024 - 2028

Hard Skill - 专业技能

- TypeScript
- JavaScript
- Kotlin
- MySQL
- PostgreSQL
- React
- Express JS
- Node JS
- Git
- Postman
- Docker
- Software Architecture
- Business Case
- Cloud Design
- SDLC
- CI/CD Pipelines
- AI Ethics
- C
- Unit Testing
- High-Level Design (HLD)
- Low-Level Design (LLD)
- Fullstack Web
- AI Image & Video Generation
- MongoDB
- API Design & API Testing
- Fullstack Web
- Next JS
- State Management
- Database Management
- Database Design
- AI Assited Development
- Cloud Deployment
- Business Analysis
- AI Native Engineer
- Prompt Engineer
- System Design
- Security Design
- TDD
- Security Analysis
- HTML, CSS, Tailwind CSS
- FastAPI, Restful API
- Prisma Client
- n8n, Generative AI
- Security Analysis
- Peneration Testing

Soft Skill - 软技能

- Professional Mandarin (精通)
- Problem Solver
- Leadership
- Strong Communication
- Agile Project Management
- Critical Thinking
- Emotional Intelligence
- English Language
- Public Speaking
- Empathy
- Time Management
- Conflict Management
- Analytical Thinking
- Resilience
- Digital Literacy
- Attention to Detail
- Fast Learner
- High Adaptability
- Willingness to Learn
- Creative Thinking
- Team Work & Collaboration

Experience – 经历

April 2026 – July 2026	Dicoding Backend Developer Javascript - Developed scalable RESTful APIs using Node.js and JavaScript following clean architecture principles. - Designed secure system architectures integrated with Google Cloud infrastructure and services.
Jan 2026 – Present	Course Net Certified Ethical Hacker certification holder - Proactively mastered industry tools to identify and assess system vulnerabilities. - Practicing ethical hacking methodologies to analyze and secure simulated environments.
10 Nov 2025 – 10 Dec 2025	Finalist Pitching Day CIMB NIAGA Project Manager - Managed the design and documentation of an e-money top-up feature for CIMB Niaga as Project Manager. - Developed a technical proposal aligning software engineering principles with corporate digital banking needs.
10 Nov 2025 – 10 Dec 2025	UMN Progammng Club Vice President - Directed social media, web, and contest initiatives via cross-divisional coordination. - Directed events planning and team leadership initiatives, achieving operational targets and ensuring high standards were met across 2 events.
24 July 2025 – 26 July 2025	Finalist Garuda Hack 6.0 – AI Native Live Demo: https://leftover.vercel.app/ Github: https://github.com/Sullivan-bit/LeftOver - Description: An AI-powered surplus food marketplace and zero-waste recipe generator functional prototype built in 30 hours to reduce food waste by connecting local businesses with consumers and helping households utilize near-expired ingredients. - Key Features & Architecture: - Surplus Food Marketplace Prototype: Enables food businesses to list surplus edible inventory directly for consumers, reducing waste at the source and offering affordable options. - AI Recipe Finder: Uses prompt-engineered AI to turn near-expired ingredients into creative recipes, preventing household food waste without requiring lifestyle changes. - Real-Time AI Resilience: Built with robust prompt engineering, response parsing, and graceful degradation mechanisms to handle API latency and failure states during real-time user interactions. - Rapid AI-Assisted Prototyping: Ideated, developed, and prototyped from scratch within 30 hours using an AI-assisted prompt → build → iterate cycle to rapidly test hypotheses, streamline features, and refine UI/database schemas under tight time constraints. - Tech Stack: Firebase (Auth & Realtime Database), Tailwind CSS, Gemini / LLM APIs, Rapid AI Development Tools.
